

User Manual – Assignment 1

To get the client server application running as intended do the following:

1. Identify which machine you would like to be your server, transfer both 'get.txt' and tserver files into the same directory
2. Run the server binary on a remote machine using the terminal
-e.g., ./tserver
3. Identify another machine you would like to be your client, transfer both send.txt' and tclient files into the same directory
2. Run the client binary on a client machine using the terminal and specify the remote server hostname or ip and the request command
-e.g., ./tclient 192.168.0.1 GET
-e.g., ./tclient server.bcit.ca SEND
